

Investonaut

A CrewAI multi-agent crypto trader on the Alpaca MCP server — three LLM agents (bull, bear, manager) deliberate the market every 15 minutes, and their verdict directly moves per-symbol allocations and the risk cap.

CrewAI Debate

Bull / bear / manager agents read the market and return per-symbol leans + a risk stance, synthesized into a single verdict.

15-Min Cadence

Decisions every 15 minutes, 24/7 — even when equity markets are closed, crypto keeps trading.

Risk Rails

Cap bull 1.10 / bear 0.85, exposure cap 95%, circuit breaker, no naked shorts — enforced pre-broker.

Three minds, one book

Each agent independently reads the market snapshot and returns a per-symbol lean (overweight / neutral / underweight) plus a risk stance. The manager synthesizes a verdict.

Bull · gpt-oss:120b

Proposes overweights on momentum leaders, raises the risk cap when it reads strength.

Bear · nemotron-3-nano:30b

Flags underweights and hedges, lowers the cap when it reads fragility.

Manager · gemma4:31b

Synthesizes the debate into a single verdict — the allocation multipliers and cap factor that actually trade.

Not advisory-only — the crew verdict **moves allocations** within a 0.7–1.3x band and adjusts the risk cap. It has real influence on the book.

From debate to trade

0.7–1.3x

LEAN BAND

Each symbol's allocation is multiplied by the crew's lean — overweights get more, underweights less.

1.10 / 0.85

CAP FACTOR

Bull stance raises the exposure cap 10%; bear lowers it 15%. The crew steers total risk.

15 min

CADENCE

Verdict cached for the decision interval — fresh deliberation every 15 minutes, around the clock.

- ▶ Three cheap ollama-cloud models — **no GPU cost**, OpenAI-compatible at ollama.com/v1.
- ▶ Verdict lands in the same **SQLite audit log** as every order — fully auditable.

11 symbols, crypto + equities

A liquid multi-asset universe — crypto trades 24/7, equities during market hours. The crew leans on all of them.

SYMBOL	CREW LEAN	READ
BTC	1.30x	Bull overweight
ETH	1.15x	Bull overweight
SOL	1.05x	Neutral
XRP	0.90x	Neutral
HYPE	0.80x	Bear underweight
NVDA	1.20x	Bull overweight

Risk rails fire before the order ships

1.10

cap factor · bull

0.85

cap factor · bear

95%

exposure cap

0

naked shorts

- ▶ Exposure scaled when it exceeds the cap — **de-leveraging orders confirmed live**.
- ▶ Circuit breaker trips → **book goes flat** until regime confirmation.
- ▶ Every decision and rejection logged to **decisions.db** — a P&L narrative, not a black box.

Alpaca MCP — agent decisions are tool-visible

The agent's market reads and order decisions run through

`uvx alpaca-mcp-server`, so every step is auditable — not a black box.

```
bin/run_mcp.sh  # stdio / streamable-http / SSE
--env-file ~/protonaut-live/.env
uvx alpaca-mcp-server  # verified on cudacuda
```

stdio

Local agent ↔ server on the same box.

streamable-http

Remote/containerized agent surface.

SSE

Event-streamed tool callbacks for the demo.

Ship status

PIECE	STATUS
CrewAI advisory layer (bull / bear / manager)	LIVE — verdict moves allocations
15-min all-day cadence	VERIFIED — fires every 15 min, 24/7
Risk rails (cap / exposure / circuit breaker)	LIVE — de-leveraging confirmed
Alpaca MCP launcher (bin/run_mcp.sh)	VERIFIED
SQLite decision audit log	LIVE

A multi-agent trader, not a single strategy

Real multi-agent reasoning

Three LLM agents debate and the manager synthesizes — the verdict has **actual influence** on the book, not just a suggestion.

Runs when markets don't

Crypto trades 24/7. The crew deliberates every 15 minutes regardless of equity market hours.

Cheap to run

Three small ollama-cloud models — no GPU cost, no heavy inference.

Fully auditable

Every verdict, every order, every rejection in one SQLite log.

The story is **multi-agent reasoning with real influence + risk rails + honest, auditable operation.**

SUBMISSION

Three Minds, One Book.

A CrewAI multi-agent crypto trader on Alpaca MCP — bull, bear, and manager deliberate every 15 minutes, and their verdict moves the book.
